## Multiple Vulnerabilities in Microsoft Products

**Original Issue Date:** 11 December 2015

**Severity Rating:** High

### Description:

Multiple vulnerabilities have been identified in Microsoft products and they can be exploited by remote attackers to cause execution of arbitrary code, gain knowledge of sensitive information, take full control of the affected systems and bypass security restrictions. The vulnerabilities reported are as follows:

| Vulnerability  | Description  | Affected Software   | Workarounds  |
